DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-35, drawn to method and apparatus for verifying a design including specific delay, copying, or inputs for Boolean function, classified in class 702, subclass 119.
- II. Claims 35-43, drawn to method and apparatus for verification using a simulator, classified in class 717, subclass 135.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the specific delay, copying, or inputs for Boolean function is not claimed. The subcombination has separate utility such as verification of a design without the use of a simulator.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
